                                                                           Sequence 1, Application US/08343883

Sequence 1, Application US/08343883

Sequence 1, Application US/08343883

Patent No. 5573767

GENERAL INFORMATION:

APPLICANT: Dudde J.M.

APPLICANT: Chouvet, Claude J.M.

APPLICANT: Chouvet, Claire D.

APPLICANT: Bonneau, Michel B.

TITLE OF INVENTION: Method for improving the organoleptic

TITLE OF INVENTION: qualities of the meat from uncastrated male domestic

TITLE OF INVENTION: peptide, in particular for producing these vaccines...

NUMBER OF SEQUENCES: 2

CORRESPONDENCE ADDRESS: 2

ADDRESSEE: Larson and Taylor

STREET: 727 Twenty-Third Street, South

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 6, Application US/08447175A
Patent No. 5869240
GENERAL INFORMATION:
APPLICANT: PATTERSON, DALE H.
TITLE OF INVENTION: METHODS AND APPARATUS FOR SEQUENCING
TITLE OF INVENTION: POLYMERS WITH A STATISTICAL CERTAINTY USING MASS
TITLE OF INVENTION: SPECTROMETRY.
NUMBER OF SEQUENCES: 23
CORRESPENDENCE ADDRESS:
ADDRESSEE: Patent Administrator - Testa, Hurwitz &
ADDRESSEE: Thibeault, LLP
STREET: High Street Tower, 125 High Street
CITY: Boston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 28 Application US/09026276

Sequence 28 Application US/09026276

Patent No. 6319503

GENERAL INFORMATION:
APPLICANT: Fenten, John H

APPLICANT: Tramontano, Alfonso
APPLICANT: Lohnas, Gerald L

APPLICANT: Pilon, Aprile L

APPLICANT: Roberts, Steven F

TITLE OF INVENTION: HEAT-SHOCK FUSION-BASED VACCINE SYSTEM
FILE REFERENCE: U.S. Patent Application No. 6319503 09\026,276

CURRENT APPLICATION NUMBER: US/09\026,276

CURRENT PILING DATE: 1988-02-19

NUMBER OF SEQ ID NOS: 35

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 28

LENGTH: 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

Sequence 24, Application US/07690983D

Patent No. 5403586

GENERAL INFORMATION:

APPLICANT: SUSSELL-JONES, Gregory J. APPLICANT: TSOMIS, Con G.

APPLICANT: TSOMIS, Con G.

TITLE OF INVENTION: FUSION PROTEINS

NUMBER OF SEQUENCES: 47

CORRESPONDENCE ADDRESS:

ADDRESSE: Foley & Lardner

STREET: 3000 K Street, N.W.

CITY: Washington, D.C.

COUNTRY: USA

COMPUTER: IBM C Compatible

COMPUTER: IBM C Compatible

COMPUTER: IBM C Compatible

OPERATING SYSTEM: PLOPDY disk

COMPUTER: IBM C Compatible

OPERATION SYSTEM: PALON 1991

CLASSIFICATION NUMBER: US/07/690,983D

PRICH APPLICATION DATA:

APPLICATION NUMBER: DCT AUG-1990

CLASSIFICATION NUMBER: 29.768

REFERENCE DOCKET NUMBER: 16786/148 CHAC
